

An Editor's Perspective on Reporting of Patient/Stakeholder Engagement

FRANCIS KEEFE, PH.D.

EDITOR IN CHIEF, PAIN

Perspective Matters

Submissions to PAIN:
Randomized controlled
trials (RCTs) reporting trial
outcomes

Submitted
manuscripts

Review

Key concerns that arise in review of RCT

Study pre-registration

Standardization of treatment

Use of multiple study sites

Interventionist training

Quality of electronic medical
record data

Treatment fidelity

Choice of the control, comparison
condition

Concerns about reporting stakeholder involvement in an outcome trial

Was a description provided?

Was it clear?

Did the authors build the case for it?

How was it accomplished?

What was its impact?

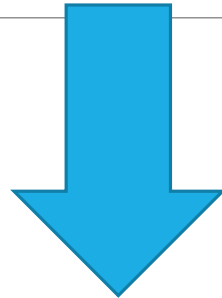

Can it be replicated?

The Challenge for Authors

Being transparent in tight spaces

Traditional Approach to Publishing Randomized Clinical Trials

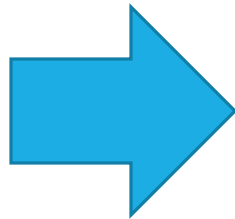

Primary
outcome
paper

Publishing pragmatic trials that feature stakeholder input: A more balanced approach

Develop a publication plan early

Goal=build the case for and feature stakeholder involvement

Possible components

- Review paper
- Protocol paper
- Intervention manual/paper
- **Primary report**
- Secondary reports
- Study specific online appendices, study materials

Discussion
